

Dear FCC,I have read several articles on what isincluded in ET Docket 03-104.
The idea of experimenting with
electrical lines at this time when States, Power Companies,
and the Federal Government is looking into ways of restructuring
an outdated system of power distribution is distressing.
Every time a disaster or emergency occurs it seems that some cell phones
won't work and people in emergency response teams are asking for
amateur radio operators to help them. When communication systems fail
they are part of the first response in the initial stages of an
emergency
or disaster even in the limited capacity of getting word out that
loved ones are okay. I work with children and
help them to understand how radio works. I hope they will get
their license and become part of the pool of trained amateur radio
operators.
I feel added interference that BPL would generate will prohibit them
from hearing anything on HF but noise. Young people would give up
and we would lose our future operators.
Please do not approve BPL.
